

Title: I'm looking for a pie chart that compare a present cost of Console Game hard copy distribution with possibilities of NFT Copy distribution. Can anyone help me?

I'm trying to present a Bull case why GameStop NFT marketplace might be the future of Console/PC digital game distribution to my friend and I remember there was a DD with a chart showing the difference and benefit to Game Developer if they choose to distribute their copy in a form of NFT on GameStop market place with GameStop getting a cut in every transaction or something instead of going with the current model of distribution.

Anyone remember where is that chart or the post?

Thank you
