****The MOASS / Infinity Squeeze:****

To force the short positions to close, the number one priority is to get the float DRSD. This means getting the word out beyond reddit to other GME holders and getting more shares DRSD. If the float is shorted 300% to 1000% as reflected by the DD here, and less than 50% of shares are sold during margin calls this contributes to MOASS. Not selling, or keeping the float DRSD prevents the manipulation and contributes to an infinity squeeze.

The options: (1) DRS all you are comfortable with to lock the float and trigger margin calls equals massive squeeze (2) hold, then sell only what you need to during squeeze resulting in not enough sold for Shorts to cover equals MOASS (3) DRS the float and hold equals no manipulation and then external shares (non-DRS) held against Shorts covering would equal infinity squeeze.

****Limit vs Market Orders:****

When its time to sell, use a limit order over market orders to specify your price. This is favoured when you want to trade a stock that's illiquid or the bid-ask spread is large due to volatility (SQUEEZE/MOASS). With market orders your trade is guaranteed to process if there are any buyers, but your trade may be *filled at a price much lower* than what you could have otherwise gotten.

****DRS / Computershare:****

*****DRS your shares to Computershare = Ownership of your shares = Removal from DTC = Removal of shares that MMs and SHFs can manipulate!*****

When you DRS your shares they are owned by you, registered in your own name, reporting directly to Gamestop. This adds an extra layer of protection over having your shares held in street name with a broker. DRS for GME is facilitated through ComputerShare, who will also facilitate your trades (if the time comes) to sell electronically and efficiently through one of their contracted brokers. Trades are settled on a lit market through the NYSE.

****DRS the float is the only way investors can mitigate the manipulation of our beloved GME!****

DRS your eligible shares if you are comfortable doing so for the safety of owning your shares and guaranteed receipt of any dividends/NFT issued. Y*our shares are safer with DRS - as the Computershare website says, DRS offers an extra layer of protection over broker shares in street name!*

****Share the Story! Share the DRS story outside of reddit where you can.****

Other investors not on reddit will benefit from awareness of the benefits of DRS. Plus, given the DD supporting the manipulation and hidden FTDs, if the float is DRSD with Computershare, then there is irrefutable proof of GME's naked shorts and they can be held accountable by forcing them to cover their short positions.

*****Buy, DRS, Hodl, & Share the Story*****
