So what's the chance that SHF bought way OOM calls in busy trading yesterday and **\*\*exercised\*\*** in seconds before the halt today?

1. We know Mayo boy knows what the price will be early.
2. We know that for at least brief moments he can fuck with the price, especially the bid-ask quote.
3. We know that he uses algorithms to effect trades in fractions of a second and can pre-plan or program if/then tactics.

So lets say he buys calls - the 4/1/22 \$200 call had 23,611 volume yesterday. Let's say Kenny boy bought 20,000 of those. Yeah, open interest is only 8,292, but that's for suckers who think buys and sells should be matched at settlement. L MAYO

So Citadel has those 20,000 calls (20,000 x 100 is 2 million shares). And for a brief moment this morning, he lets the actual ask run without manipulating it down. But he has his computers set up to exercise his ITM calls to get those 2 million shares the moment GME quotes above \$200. But no shares trade (because he controls that of course). And how to make sure no shares trade, but have the quote be above \$200? Make the bid go to zero and the ask go to 489,000.

Anybody know if/where/when this would show up in regulatory filings?

PS Let's not even talk about the 15,560 \$315 calls traded yesterday. OK lets. That's another 1.5 million shares.
