I have had two accounts for a long time, and would love to DRS them both, but I don't believe I can for at least one? In any case, here's what I found in clicking through my accounts just now.

Account #1 is a rollover 401(k) to an IRA from an old employer. The company is big and starts with F. When I looked at my transactions, I see a DISTRIBUTION for 3X the number of GME shares I held, at \$0.

Account #2 is my trading account and it is also with a big firm that starts with E and allows me to TRADE stocks. When I look at my account, it shows that I a BUY 3 for X the number of shares I held in GME at \$0.

I'm assuming this buys them some time to buy some shares for all these placeholders, but I also assume that my tax consequences will eventually be brutal (infinite profits, since I bought at \$0?)

A friend of mine showed a similar to #2 event on his Touchdown account...

What does everyone else's transaction history show?
