Short Borrow Fee Rates

GME / GameStop Corp. short borrow fee rates are shown in the following table. This table shows the interest rate that must be paid by a short seller of US:GME to the lender of that security. This fee is shown as an annual percentage rate (APR). Lenders are funds or individuals that own the security that have indicated to the broker that they are willing to lend it out. Dividends paid to a shorted security go to the owner/lender of the security, not to the borrower.

Start, Min, Max, Latest (Borrow Rates)

These represent borrow rates for the day, with the rate at the start of the day, the end of the day (or the latest for the current day), the minimum rate in the day, and the maximum rate for the day. Unlike the **Options Implied Borrow Rates**, our source for this data always presents them as positive numbers, and they represent an annualized interest rate that is paid by the borrower for the shares.

Update Frequency: Intraday every 30 minutes.

Last update: 10m
