Update to yesterday's chart. Not sure if it was clear from my previous post, but I started counting the days from FIRST POP (or first major price trend reversal) to the SECOND POP (not to the PEAK, which appears to be mid next week).

edit: FIRST POP itself is a bit of a moving target as well. That's why there's two versions in RUNUP 3 and two versions in RUNUP 4. For this runup, the 4% gain on Aug 20 might have been the trend reversal / first pop moment (which would mean today is DAY NINE).... but if Aug 24's 27% gain is the true first pop, then Friday would be DAY NINE.

That being said, a reply in the previous post mentioned that there's significant pushback on upwards price movements on Fridays due to options. as such, i've re-uploaded the image with days of the week included. and yes, it appears none of the DAY NINE second pops occurred on Fridays, but rather Mon, Tues, or Wed, so maybe there's something to that.

I was interested in the SECOND POP for two reasons: 1.) because it appeared to be around a similar timeframe in the first 3 runups, whereas the peak action was a little less consistent in timing; and 2) because it's a fun mid-point that jacks tits, letting us know we really are on the right track, rather than the first pop being an anomaly.
