

Title: GME only has 8.61 million shares sold short according to Bezinga article that supposedly came from numbers given by GME. Not trying to push FUD but where is Bezinga getting these numbers?

(GME) - Analyzing Gamestop Corporation's Short Interest

01/20/22 10:36 AM

January 20, 2022 10:36 AM ET (BZ Newswire) – Short Sellers

Gamestop Corporation's (NYSE:GME) short percent of float has risen 33.63% since last its last report. The company recently reported that it has **8.61 million shares sold short**, which is 13.67% of all regular shares that are available for trading. Based on its trading volume, **it would take traders 3.7 days to cover their short positions on average.**

Why Short Interest Matters

Short interest is the number of shares that have been sold short but have not yet been covered or closed out. Short selling is when a trader sells shares of a company they do not own, with the hope that the price will fall. Traders make money from short selling if the price of the stock falls and they lose if it rises.

Short interest is important to track because it can act as an indicator of market sentiment towards a particular stock. An increase in short interest can signal that investors have become more bearish, while a decrease in short interest can signal they have become more bullish.
