Would it be possible or is it possible for SHFs to use open short positions as collateral or package these with something else and profit from them continually?

For example, SHF opens short position at \$100, company goes bankrupt, SHF keeps short open to avoid paying taxes, delisted company stock is now worth \$.01 giving the SHF an unrealized gain of \$99.99.

Would it be possible to then use that as collateral or package that up into some financial investment product and sell it, and possible continue to do this?
