I have access to Nexus Uni through my university's database. Searching for "GameStop Short Interest" I was able to locate around 45 articles containing the short interest & short interest percentage from 2012 and decided to stop right before the sneeze.

I pulled the relevant data into a spreadsheet for simplicity's sake- the green highlighted cells contain data directly from the source, whereas the orange is calculated from those provided data points.

The column headers may be incorrect (total outstanding shares vs. float) as I am fairly financially illiterate so please let me know if I can rename them to a more fitting title.

This data may be useless for all I know, but I figured I would go ahead and post it to confirm whether it is.

Some articles contained the percentage owned by institutional investors, and one even had both the institutional and insider ownership in the same one.

[Spreadsheet of the values.](<https://imgur.com/gallery/DXmwy89>)

[Few samples of institutional and insider ownership.](<https://imgur.com/gallery/yekdJou>)

[Ownership >100%??](<https://imgur.com/gallery/KcNsAtA>)
