Desperate ape here seeking help with GME wallet. Anyone willing to maybe video them moving coins from L1 to L2 inside the wallet?

I have moved LRC to L2 from L1 I have eth in my L1 and it took some for the fee when I did the move however my coins are still in L1. On the activity tab it just shows "Approve" banner with a link to etherscan that says success. Am I doing something wrong? I've seen most apes say it's done within 5 mins and so easy but for me it's been 5 days and I've contacted support and just get the same message I've seen before. Any help appreciated.
