When [selling an NFT](<https://ibb.co/qFLXC7p>) a market fee is charged of 2.25%. This is the money gamestop collects for running the market.

When [buying an NFT](<https://ibb.co/j3cPXJD>) a network fee is charged (no minimum/maximum, based on network activity I believe) by loopring for running the network the market is based on.

For some reason, sevenfourone.live is trying to make an estimate subtracting the second fee from the first fee to compensate for loopring's "cut"

This is overthinking it, and WRONG! They are two seperate fees, one paid by the buyer, and one paid by the seller.

Gamestop is collecting 2.25% on every transaction. Loopring is also collecting its fee, independent of Gamestop's fee.

Hope this helps, and hope they update the website to better reflect this, a lot of people spreading fud already and our own tools are massively underreporting what gamestop is earning, already.
