Minting a single NFT on the ethereum blockchain would cost circa \$250.

On the L2 system Loop offer the fee is down to \$2.50.

If GameStop are to issue a NFT dividend in which they have to mint 70 million NFTs:

On L1 : $\$250 \times 70 \text{ million} = \17.5 billion

On L2 : $\$2.50 \times 70 \text{ million} = \0.175 billion

Worth waiting 12 months for Loop to release it's L2 solution right?

I might be completely wrong on how NFTs work and happy to be corrected.

To the moon.
