In reviewing the quarterly earnings report today under the "Notes Details" section, the "Earnings Per Share - Narrative (Details)" section I noticed that 5.2 million shares (the same amount that was DRSED as of the end of October 2021 according to the Q3 Earnings documents) ****are excluded**** from Computation of Earnings Per Share. (Link to Imgur / screenshot of the table that I'm referring to: <https://imgur.com/a/bws16JD>)

To find this data

- Go to: <https://investor.gamestop.com/node/19571/xbml-viewer>
- Click on 'Notes Details'
- Then under the 'Notes Details' heading click on ****Earnings Per Share - Narrative (Details)****

Is this standard protocol to exclude direct(ly) registered shares from the 'Earnings per Share' calculation? I've read 10-Qs and assorted financial documents / regulatory filings as an employee of companies that were getting acquired, going public, etc. but I don't have any experience with DRSED shares and how those are or are not usually tabulated into Earnings per Share calculations or what the exclusion of DRSED shares from earnings calculations might mean.

Does anyone have any insight on what this means or could potentially mean?
