> **■■■:■■■:**

>

>GME with a price decrease today.

GME broke above the MOAW but seems to be consolidating from the previous rip we had on Wednesday, November 3, 2021.

GME has broken below LOG Trend Line 1.0 but in line and above with LOG Trend Line 2.0.

Volume is quite low today compared to the rest of the week.

>

>

>

> **REMEMBER: We Started this week off at \~185.XX and Ended \~212.XX**

[Started this week off at \~185.XX and Ended \~212.XX](<https://preview.redd.it/yq13nws8ztx71.png?width=1415&format;=png&auto;=webp&s;=73b5c5ff76bb2e31a34fcbbb07a5aa6137d6a707>)

Started this week off at \~185.XX and Ended \~212.XX

>Indicators are all showing a decreasing movement.

Indicator values are all still positive.

TTM Scalper Color Signal has turned Green and reset (0/5 Red Fire Signals)- Not expecting any further upward movement- instead price consolidation at the moment.

Market Cipher showing a possible uptrend but will have to wait to see how it plays out.

Stoch on 1 MIN, 15 MIN, 30 MIN, 1 HR, and 4 HR chart seems to be bottomed out- hopefully upward movement will be seen in the future.

Indicator Breakdown:

*** **INDICATORS ON GME CHART****

* **TTM Scalper** \- The TTM Scalper Indicator is a visual way to help determine whether to buy or sell against a pivot level. The TTM Scalper Indicator white Paint bar marks a "pivot high" or "pivot low." This is done after 3 higher closes or 3 lower closes. The. faster the time frame, the faster the confirmation.

* **1/5 Reds Explanation**: In this particular case - GME shows a runup after 5 red dots are hit.

* **Market Cipher** \- Market Cipher DBSI is an all-encompassing momentum indicator that uses a scoring system to interpret the signals of 36 separate momentum indicators on a candle-by-candle basis. A candle with a high score at the bottom signals bullish momentum, while high score at the top signals bearish momentum.

* Blue Triangle - Reversal

* Green Circle - Long

* Red X - Short

* **A Cup and Handle (C&H)** \- Price pattern on a security's price chart is a technical indicator that resembles a cup with a handle, where the cup is in the shape of a "u" and the handle has a slight downward drift. The cup and handle is considered a bullish signal, with the right-hand side of the pattern typically experiencing lower trading volume. The pattern's formation may be as short as seven weeks or as long as 65 weeks.

* **A Head and Shoulders (H&S)** \- Pattern is a technical indicator with a chart pattern of three peaks, where the outer two are close in height and the middle is the highest. A head and shoulders pattern—considered one of the most reliable trend reversal patterns—is a chart formation that predicts a bullish-to-bearish trend reversal.

* Red Vertical Bar Indicates Bearish H&S;

* Green Vertical Bar Indicates Bullish H&S;

* Green **++** Indicates Bullish H&S;

* Red **x** Indicates Bearish H&S; (Similar to Cipher Red **X** but smaller)

* White **** Indicates Both Bearish and Bullish H&S;

*** **INDICATOR ROWS****

* **MACD** \- Moving average convergence divergence (MACD) is a trend-following momentum indicator that shows the relationship between two moving averages of a security's price. MACD is the Blue Line and the Orange Line is the Signal Line.

* **Stochastic** \- A stochastic oscillator is a popular technical indicator for generating overbought and oversold signals.

* **RSI** \- The relative strength index (RSI) is a momentum indicator used in technical analysis that measures the magnitude of recent price changes to evaluate overbought or oversold conditions in the price of a stock or other asset.

* **TTM Squeeze & SQZMOM** \- These indicators look at the relationship between Bollinger Bands® and Keltner Channels to help identify consolidations and signal when prices are likely to break out (whether up or down). This colorful indicator is displayed as histogram bars above and below a horizontal axis.

* The red dots along the horizontal axis indicate that the stock is "squeezing" out the last bit of consolidation from a period of sideways price action. It then starts to build up energy to shift to a trending market. The market trends until the momentum starts slowing down—a sign the trending action may be coming to an end.

* The first green dot after the series of red dots suggests the squeeze is on, and this market is ready to move.

* **STC** \- Schaff Trend Cycle (STC) is a charting indicator used to help spot buy and sell points in the forex market. Compared to the popular MACD indicator, STC will react faster to changing market conditions. A drawback to STC is that it can stay in overbought or oversold territory for long stretches of time.

* **ROC** \- Rate of Change (ROC) is a momentum-based technical indicator that measures the percentage change in price between the current price and the price a certain number of periods ago. The

indicator can be used to spot divergences, overbought and oversold conditions, and centerline crossovers.
* **OBV** \- On-balance volume (OBV) is a technical trading momentum indicator that uses volume flow to predict changes in stock price.

* **CV_VWAP** \- The volume weighted average price (VWAP) is a trading benchmark used by traders that gives the average price a security has traded at throughout the day, based on both volume and price. It is important because it provides traders with insight into both the trend and value of a security. *Works best in 15 MIN interval/frequency on charts.*

Remember to take everything with a grain of salt- if you do not understand- ask- but always do your own research and come to your own conclusions. Highly Recommended.
