GME: The filing shows 300 millions shares to 1 billion.

$300 - 76.34 = 223.66$ shares to be issued.

I also saw a post earlier showing these can be issued without a split? Help there

But split ratio would equal = $3.929/1$

$(300/76.34)$

$1 \text{ billion shares} / 300 \text{ million issued shares (1 bil minus 300 mil shares)} = 3.333$

$3.9 + 3.33 = 7.26$

Damn fucking close to 741 lol...

I also think it could be $1 \text{ billion} / 76.34$ and it's $14/1$ but idk shit.

Btw I have no idea if this is how u calculate a stock split and I got one of those useless mba things lol please correct me I'm excited and bored. ❤️ u all.
