

Title: I predict my favorite 2 favorite stocks will be on ■ September 15 thru 17th, 2021. Why? The 3rd Wednesday of each September is 1 of 2 semi-annual maturity dates for these Futures "Eurodollar" contracts; "The final date to which fixed and floating amounts accrue." & T+1 settlement applies.

I predict my 2 favorite "meme" stonks as the media likes to call them, will be on ■ September 15 thru 17th, 2021.

Yes I'm aware 9/15/21 passed and the stock is up ~3%. **GME was also visibly manipulated and shorted to high hell all day long, and still ended the day green.**

9/15 AMC was **down ~8 percent after heavy shorting all day AND STILL rebounded to about -0.5% loss for the day- which is basically ZERO change for #AMC**; it was shorted HEAVILY throughout the day, likely through ETF's overseas, and the price was positively impacted by the vast # of futures contracts being rolled in the last 2 hours of the trading day.

****FUTURES CONTRACTS****

3 month [Euro](https://twitter.com/hashtag/Euro?src=hashtag_click) dollar contracts are used as the shortest maturity instruments on an Interest Rate Swap curve that references 3m Libor.

Every 3 months one of these futures contracts expires, and the instruments used to build the curve are "rolled" by three months (to include a NEW, longer contract).

<https://preview.redd.it/0krt61nxlsn71.jpg?width=1119&format=pjpg&auto=webp&s=536f0517cd02a90e00c73a7b6f3708d63b92bc43>

****These expiration dates are quite a "thing" in** **CREDIT** **DEFAULT SWAPS trading****

****SO MUCH that the dates themselves are part of the vernacular and commonly referred to as "IMM dates".**** IMM stands for International Monetary Market.

<https://preview.redd.it/euhgoq2zlsn71.jpg?width=1201&format=pjpg&auto=webp&s=e87ddd6ba8f84419d45b27fd84359adf795d3a72>

The 3rd Wednesday of each Septemb[er](https://twitter.com/hashtag/September?src=hashtag_click) is 1 of 2 semi-annual maturity dates for these Futures "Eurodollar" contracts; "The final date to which fixed and floating amounts accrue."

<https://preview.redd.it/45zuxq21msn71.jpg?width=653&format=pjpg&auto=webp&s=f40bed51d992159e3f431f3db097464ffea9f63d>

#

These derivatives have a Block Trade MINIMUM of 250 lots for Contracts with Remaining Tenor ****UP TO & INCLUDING 12** **years****, & 50 lots for Contracts with Remaining Tenor ****greater** **than 12 years.****

****Futures Contracts are frequently rolled on the IMM dates, making them among the highest volume trading days of the year.****

That's SEPTEMBER 15 - SEPTEMBER 17, 2021 ■

<https://preview.redd.it/3i7ichnz7msn71.jpg?width=1886&format=jpg&auto=webp&s=6c1ed59ced0e63751c9661816d4cb69d0205c6be>

****Treasuries trade as 't+1'**, meaning that they settle one day after the day the price is set.**

Futures, in this context, can be considered to be ordinary trades but ****with 't+90' or 't+x', where x is the number of trading days from now until the futures contract settles (delivery)****.

\$AMC and \$GME will reflect the price action of futures/CDS contract "rolling" 1 day after due to the settlement, so they WILL reflect buying from 9/15, on 9/16 & subsequently 9/17/21 ■

This was originally posted yesterday in Superstonk, but I've been banned, because I'm a jerk to shills. Whatever. I've updated the DD and posted it here, but expect more of the same of course.
