Linked Post Content:

Prime brokerages charge \$100,000 to \$500,000 for full ticker analysis, which is obviously beyond us. BUT if you use the right search terms in Google, it can find older analysis anywhere on the internet if it's not behind a firewall. The trick is to put in `[[company name] stock analysis filetype:pdf.]`(<https://www.google.com/search?q=stock+analysis+filetype%3Apdf&oq;=sto&aqs;=chrome.1.69i57j35i39j69i60j69i61j69i60.1760j0j4&client;=ms-android-uscellular-us-revc&sourceid;=chrome-mobile&ie;=UTF-8>)

The filetype:pdf is important because if you leave it out you'll get news/wiki/investopedia type sites while the good stuff is on page 1,521.

This will immediately bring you to reports from institutional traders which will mostly be slightly dated by a year or two. Most of the reports won't be comprehensive, instead focusing on categories like valuation, profitability, economic moat, etc. But still, these will be insanely detailed reports which are the same reports that market movers are using. You might even find more obscure reports, like how I put Raytheon into this search and found a court report about an injunction between Raytheon and the Navy over the cost of rocket fuel.

You're welcome.

Edit: I totally ripped off this idea from Benjamin on YouTube. He's the source.
