Im so sad that i didnt screenshot, but I unlocked my phone and have the widget that shows my account balance on fid brokerage. I know its hard to believe something that I have no proof of but my account balance showed around \$123,000 and I only have 36 gme shares on this account. I saw the number and clicked on the widget to check the app but when I went back to my home screen it corrected back to the close price and showed my actual account balance. I should've screen shotted it before i opened the app but i was just wondering if anyone else had something similar happen to them right now or if my app just glitched. weird
