Happy Tuesday Apes and as many of you can tell the stock market is beginning to nosedive and hedgies r stil (XTRA) fukd.

In the midst of all this I'm Zen, price has been wrong for far longer than this slide has been going on. When all I hear is noise though, it really makes me think and want to see some more datas. Another ape in this sub mentioned something about wondering how much Loopring Gamestop has on deck given that we at least know it has to be above 250,000 for the NFT marketplace. So this got me digging and sleuthing...

Based on recent commotion on Twitter from Matt Finestone over the gamestop.eth ENS domain, I figured that is where I should start. I used etherscan for everything, don't you love financial transparency?

First I searched Matt's ENS (finestone.eth not 3body.eth) and mostly only found his personal crypto dealings, he has good crypto investing hygiene I recommend if only to get alpha on how to trade / invest good, he holds some Loop no surprise.

Next, searched gamestop.eth — trying to see if anyone from Gamestop probably Matt had interacted with that wallet... no dice (yet at least)

At this point it was 1AM and I had been flipping through tons of random wallets & transactions and all apes need at least some SHORT sleep, but I had 1 or 2 more ideas to try.. so I searched the domain that's popped up in the stonk subs nft.gamestop.com — and what do I find? A wallet address (0x13374200c29C757FDCc72F15Da98fb94f286d71e) **Angels sing**. From here I went to Etherscan and searched all LRC holders of more than 250,000 tokens since we know that is the baseline and see if I could find exact holdings... strangely it wasn't there? So I got the wallet address wrong, but what other ones could I try?

[i love pages with good ui](https://preview.redd.it/fl81b3rgtr281.png?width=1084&format;=png&auto;=webp&s;=ae5a9fd31f81402a5285127ebe8889bfbccf28e0)

I stopped trying to find GME related wallet addresses because at this point I think thatthey intentionally have their development or main wallets obscured so they don't have a bunch of apes sending random shit to it like the gamestop.eth wallet

So I started thinking... if Loopring and Gamestop are going to be "partners" and at the grand scale that we were thinking, maybe just maybe there were direct transfers of LRC from one of the top people at Loop — Loopring CEO Daniel Wang (danielwang.eth) was luckily the only one I had to search through. If you double check yourself, make sure you are in the ERC20 Txn Section on Etherscan to see the following:

So if you are following me to this point you probably are thinking fuck you what do you know you damn dirty ape, how are we sure of the hundreds of transactions that Daniel has that this to-wallet belongs to GS? Well I thought the same thing after a couple hours of fruitless searching until.... (loose connections ahead)

If you go back to Ryan Cohen tweets from 92-96ish days ago (mid/late august) and same for Loopring (august-mid Sept) there are Pink Floyd references (60s music/pictures of the album cover) and these dates seem to line up nicely when it seems like Gamestop would have been ready to embark on the partnership after a couple months of hiring and planning from Late May (when positive news broke about Gamestop getting into NFT space - google "gamestop nfts" and you'll find a ton of news) through the summer - also as Loop was finishing up their actual L2 solution to NFTs as well.

Even curiouser... When I started at the beginning of the ERC-20 Txn history of the supposed gamestop nft marketplace wallet - you can see that the first 3 acquisitions of LRC total up to 236,726.. just getting the feet wet and seeing to get best price on the minimum 250k? Think again ape. (Read following graphics from bottom to top for chronological ordering - order of pics is from oldest to newest transactions)

I could sit here and tell that I'm certain this is the GME wallet based on the type of activity they are doing via Uniswap and from reading into how the LRC L2 / Defi in general works and how USDC & Day come into that picture, but this was just starter research (I'm shirking work to write this right now) and I'm not at all 100% certain.

If any wrinkled brain apes want to do the extra confirmation on this and any others wanting to do the net values of LRC and other tokens in this wallet and how the dates could correspond to different events be

my guest. If you find an alternate wallet address that is the actual GS one (has to be out there somewhere) come back here, call me an asshole and we can cheers over fact checked DD.
