Buying pressure from retail is most likely 250-500k net a day. The piglets have started suckling from the CS teat and should take about 10 weeks until that sow is dead and gone. Read that you have to 10% free float to even be in the game so I'd guess at that time RC ringading dings Mr. Bodson and says " I got a running average of 90% shares registered, how should I handle this? I don't really want to play in ya game so I'm gonna go ahead and just dip out, mkay? Might wanna start wrapping stuff up on your end cuz it won't take long til we full up."

Or something to that effect.

Whatever tomfoolery they had planned, they thought they had 3 months until the next cycle. They are going to need to pull some big stunts very soon within a shortened timeframe. I hope someone fucks up and puts a decimal in the wrong place.

That is all
