Hey everyone! hope all is well. I posted a while ago that the MACD crossover on the 1 week is going to be the run that takes us to Uranus. I just wanted to update you on the charts that I colored on to confirm your bias. Of course none of this is financial advise, I eat crayons and I am very retarded.

First, I'd like to show you a chart I colored on a month ago showing you what I thought was going to happen. Turns out that the analysis has been accurate so far

[This is the chart is a month old. I will show you how the chart looks now](<https://preview.redd.it/2absm72v36a91.png?width=1138&format=png&auto=webp&s=eccd9445974be9f864cc954d113b467b5e2c1b3a>)

[This is the 1 day](<https://preview.redd.it/v9rqpgx646a91.png?width=1156&format=png&auto=webp&s=f737d005866efffc6eb6c228b0034b55fcd692e>)

The green arrow is showing the triple bottom pattern we are seeing right now. This is very bullish for gme. The funny thing is that I drew in a little triple bottom in the above image when I speculated what was going to happen.

The MACD (purple Circle) - flipped green and we are about to see a big reversal soon

Stochastics (pink) - has a golden cross and is going up

A/D (blue) - Is going up and about to pass a resistance line

Aroon (orange) - is over sold and will more likely go up soon as well

Overall - Shit is going to start getting interesting now and I hope everyone is buckled up. We will start seeing significant gains shortly. With the Splividend being announced I do have to adjust the analysis slightly for the dip after the dividend.

[This is the 1 week](<https://preview.redd.it/bhmstso866a91.png?width=1153&format=png&auto=webp&s=38a60e734d02e749609fc8921aa5ac67ea7b59b3>)

I posted around 5/24 that this run is going to take us to Uranus. I still believe that is correct. I highlighted with the purple circle the positive MACD crossover that we are still in. We are still in a bull cycle. With the recent news and how the 1 day chart looks I believe we will see green histograms on the 1 week MACD shortly.

All indicators are pointing up.

I drew with green crayon to show you what I think will happen.

Overall - I think GME is going to keep climbing up until the dividend. What's really crazy is that NFT marketplace will be launched soon, GMErica is good to go after the 28th, and there is still a 3:1 split left in the tank. What ever R.C. has planned is going to completely turn the world upside down, and all of us are going to be getting some tendies.

I'd also like to be clear, I still think the true endgame is GME converting to a tokenized stock and taking their shares away from the nyse. DTCC has 90 days to provide the shares after that announcement. Ryan Cohen has calls that expire in Jan. Everything that is happening right now is leading to the main event, and I for one am jacked as ever. I love you all of you! I can't wait for the exciting these to come

TLDR: I think GME is going to keep climbing up before the dividend, after the dividend more good news will come to get it to spike again. Even after that there is still a 3:1 split available along with other things the GME team are able to do

TARD: We're on our way to Uranus
