

Title: Think about this: DRS removes MMs and SHFs ability to control the share price through naked shorting, right? Who assumes control of the share price once MMs and SHFs lose control? Retail? Nope. Long Hedge Funds assume control.

LHFs have lotsa money and lotsa shares. If they want the share price to go up, they buy and DRS shares. If they want the share price to go down, they throw shares onto the market. This gives LHFs the ability to hasten or delay MOASS.

Here's what no hedge fund can do: They cannot stop MOASS. Retail and DRS make MOASS a certainty. MOASS marks the point where LHFs lose control of the share price and retail assumes control of the share price. Retail wants MOASS. Retail wants control. Retail is the final boss. DRS makes it so.

My point to all of this: There will be a transition period after SHFs and MMs lose control. LHFs will be in control for a period of time. They will use this time to position for maximum profit. They have to transfer power to retail eventually, because we will buy up all their shares and DRS them otherwise. LHFs will control the timing and trajectory of MOASS to maximize profits for themselves.

TLDR: MOASS will not happen randomly. It will happen when long hedge funds pull the trigger.

Have a great day and DRS your shares!
