TLDR: I need link to see CTB for GME all the way back til 2013.

SEC seems to have given concession to MMs and Institutions that they may not be engaging in scummy short trading activity via options back in 2013 by saying that a deterrent may be the high cost to borrow fee. Well, gloriously, the CTB has been getting lower for GameStop, right? I want to be able to see with confirmation that it was higher then, and now lower. Can you help me with my DD Quest

[<https://www.sec.gov/about/offices/ocie/options-trading-risk-alert.pdf>](<https://www.sec.gov/about/offices/ocie/options-trading-risk-alert.pdf>) is the SEC report I referenced.

" It is unlikely that a broker-dealer would either be able to borrow shares or buy in the position without incurring or passing on the costs due to the high borrowing fees and large capital commitment associated with the trading. " Seems like that behavior is just cost to do business for them. It doesn't seem like an undue hardship for them at their rate of borrowing (with promise to return, ofc, right?)
