Rn GME has 6 bill market cap, which is laughable when you consider they have 1.2 billion in cash, 300 million in inventory, no debt, have grown online sales 30% throughout 2021, while increasing product selection by 60% (aka a pivot into online retail), all while poaching tons of high profile executives from the biggest tech companies in the world. This positive fundamental turn around is backdropped by their development of a blockchain/nft product that has the potential to be their greatest revenue stream within 3-5 years (they do 1-1.2 billion in revenue a year, speculation obviously but from what we know the project will be industry defining)

So fundamentally it's all a great investment, but with a confirmed (by SEC) minimum short interest of 128% in January, and confirmed (by SEC) that closing did not make up the volume observed during January 21 price run up, and confirmed shorting of on avg 70% of daily volume for literally 6 years (why they are in this mess in the first place), you start to see not only is the financial system fully corrupted, but Apes have them by the balls with GME. And we're not selling. We are not leaving period. So whether you believe what I've just said or not (all of which you can research as I've sent all pertinent links already but can resend if need be) there is a community of 130k individual investors who have already directly registered their shares, (on the 17th we will see how much of the float we've locked -5.2 mill on 70k

locked -5.2 mill on 70k
accounts in the oct quarterly
report) on a free float of 62 mil,
with a hell of a lot more in
retirement accounts/tax
sheltered accounts that cant
be registered. We own the float
we are not selling we are
buying and registering more
the price is fake we can wait
forever they are running out of
time.
