## DD Mathematician GME

I am an Italian Ape who does not understand anything about stocks, so I just buy, hold and DRS and .....  
Let's take today's price of 100 dollars into consideration. We point to 65 million shares as if the DRS had never started. 65 million shares at \$ 100 is \$ 6.5 billion. Let's say we are 2 million investors. Now we all know that Game Stop in October had talked about 5 million shares subjected to DRS. In the following three months many people continued to do DRS especially us Europeans with the long waiting times for letters, so always to make an "average" let's say that we are already at 15 million shares already DRS? obviously it is my estimate that I believe quite realistic and not too fancy. But the central point is another: that would mean another 50 million shares to block the float, it seems a lot for 2 million monkeys ? absolutely not! 50 million shares at the price of \$ 100 divided by 2 million monkeys is only 2,500 fu\\*\ing dollars each! Let's look at the next 100 trading days, about 4 months. That would be \$ 25 a day, \$ 125 a week. Do we spend it on bullsh\\*t? I spend it almost only on cigarettes! Obviously not everyone can, some will buy more, some will buy less, but we are a family and we help each other. This is not financial advice, no one should invest what they cannot afford to lose, but see this as the opportunity of a lifetime, in 100 years they will talk about us in history books. We will help our families, the less fortunate people. The world it's falling apart, let's make it a better place. We are so close to the finish ....
