I posted this on August 31:

January 28 - 1st peak

(41 days later)

March 03 - 2nd peak

(48 days later)

April 27 - 3rd peak (GME sold about 3mi shares, small peak)

(42 days later)

June 08 - 4th peak

(43 days later)

July 21 - 5th peak (BlackRock sold about 3mi shares, small peak)

(42 days later)

SeptembRRRRRR 1st - 6th peak - MOASS? maybe now, maybe on next peak

****September 1st**** had in fact a peak. Apparently BlackRock sold even more shares, going down to 4.7m now (they had 9m at one time). I know about rebalancing, but that means selling anyway.

Maybe Blackrock is a major player in this game and most people are overlooking their role.

Next peak should be around ****October 12****.

Any adults?

Cheers!
