I just saw the thing where Immutable X is bringing a chess-game to the market place and it looked like 3D NFT chess pieces or something. Has anyone thought about the combination of embedding 3D printing blueprints into an NFT? You could buy your (in this case) cool looking chess pieces and play in the marketplace, AND/OR print those pieces at home to play IRL.

Idk, I'm dumb enough to hold GME from Jan '21 so whatevs. Thought this sounded v cool
