

Title: Smooth brain question is this costing them a ton of capital to bring the price down or can they do it relatively cheaply?

As the question states, I'm expecting this thing to blow possibly as soon as Thursday. But I wanted to know since it seems relatively easy to bring down the price of GME despite a huge amount of ever increasing DRS shares I wanted to know how much capital this is costing to do so? Or are they able to essentially do this without huge upfront costs?
