I can't post in the other forum due to post requirements, but I think this might point to the GameStop/BRK.A swap theory.

Just happened to pull up CNBC to see how the markets were doing and I noticed a random article from out of the blue about why so many shares of BRK.A have traded recently. They claim it's due to a fractional shares reporting error that's inflating the actual fractional shares as whole shares. That seems entirely too convenient timing wise.
