[From the artist:](https://www.reddit.com/r/gamestopofficial/comments/w9sx9w/comment/ihxgqyz/?utm_source=share&utm_medium=web2x&context=3) The NFTs are part of a game, and there will be no dilution of the game pieces.

Hello, and welcome to my breakdown of the NFT marketplace launch creator Snarkle's MisAnthropes collection. For the purposes of this breakdown I'll be using the following syntax to explain the valuations of the marketplace - If I say there are 250 unique (single-edition versions) listed for .0042 eth apiece I'll write it like this: 250x1:1 @ 0042eth

Using this syntax, we have the floor(s) of the collection as:

235x1:1 @ 0042eth

10x1:1 @ 0069eth

10x1:1 @ 0096eth

22x1:1 @ 014eth

If you notice, the number of cheaper images listed at .0042eth is 235 --- multiply by around 7usd and we get 1750 aka less than 2k dollars USD, whereas the 10x1:1x0069=069eth aka about \$100. What this means is \"after 2,100 is spent on the cheapest 260 images, the floor will be almost 01eth.\"*

235x0042=.987e

10x0069e=069e

10x0096e=096e

22x014e=0.308e

Total: 1.46e <<< that's all it takes to lock the floor up to .308eth!

\\#In other words, with around \$2500 of leverage this floor can be lifted to .308, yielding an average return of .303eth, or 6060% returns in some cases

I'm therefore buying as many as I can hodl. Eth is on my bull list too, so this feels like a safe investment. The artist is wonderful, there's a game being developed which has been basically unknown to the community at large since inception, and when GameStop NFT leaves beta, I think these will sell out fast as people rush to buy new avatars and trade NFTs for the first time and the lovers of animals like me rush to grab these cantankerous misanthropes.

Thank you for coming to my Teddybear Talk
