DFV and RC Have Been Telling Us All Along and its Time We Listened

DFV's post on 6/9 of the No Country for Old Men Coin Flip where he says call it....its been right there all along. We need to be buying options.

Before I get called a shill (editing as it has happened already)

If you dont like options and dont play them fine! They are an increased leverage financial tool to enter what you feel is a good price for a position. Not a 950c YOLO. They like any investment carry risk. Shares, futures, options, crypto are all bets ON the underlying. Your shares and your money are your own, this is simply a post to discuss information on how markets work with options and what DFV was trying to tell us (options) and RC (compoo chair). I like the rest of you want this, and its right there. Im doing what I think is right and am 100% open to all opinions and discussions. Back to MY thoughts. To say an option on a GME contract at 200c for 2/18 is a bad investment isnt a bullish statement. We are trading at 138 right now, if that contract goes ITM that is a great investment. But if you dont want to, thats fine, buy through CS, and still strap in for the ride.

Oh and not financial advice!

lets go back to that time, ■ we're dejected, we fell back to 136 it was familiar territory....but all of a sudden we rode HARD to almost 350 into earnings. Why?

Their exposure with futures rollover and an insane options chain that they had to hedge for. Here we are again with ETF FTDs from them not rolling futures for nearly 2 quarters and it's ours for the taking.

We have bought until we have bled, we have DRS'd, we have read TA watched videos and now the beast is about to come out, the dawn is about to break, and we have the final tools in our arsenal to support our financial freedom, we just have to take it.

There are so many anti-this or that posts but the fact of the matter is, if you buy a far dated slightly OTM call you have dramatically increased your leverage. Here's an example - lets say you buy a Feb 18 200c for 895, the price runs up to 1,000 and you exercise that contract, that means per the DTCC rules the MM has to go on the LIT exchange and purchase those 100 shares if they havent hedged. That means they are losing 800 a share because they have to purchase it for 1k a share, netting them a loss of 80k on your options contract. Now look at the OI on that contract....there's 4,971 open contracts....if 745 people exercise (average exercised contracts is 15%) that means Kenny loses close to 60M ON THAT STRIKE ALONE.

Think about it, that is the potential, that is why they turned the buy button off, the naked shorting mixed w partial hedging makes for INFINITE LOSS POTENTIAL.

So ■ are we going to go take what is ours?

I know what Im doing and so did DFV.
