There is a video on the super sub that is gaining some traction because someone says that NFTs -> decex/fi -> digital IDs -> sovereignty and freedom.

Don't get me wrong, I boarded the GME rocket on Feb 1st 2021, DRS'd all my shares, and back Ryan Cohen completely.

What does concern me is that digital IDs are being slipped into the blockchain/nft conversations as a revolutionary device. I believe privacy is a right we all deserve, and tying our identity to a blockchain where transactions can be tracked and made public sounds... not like privacy. The World Economic Forum mentions "The Great Reset" frequently, and I worry that blockchain technology has the potential to further goals of the corrupt elites, \*if abused\*. (If any apes are not familiar with Karl Schwab, you ought to be)

I really just made this post to get a discussion going, because I'm a lurker and can't comment on SS. Feel free to post arguments and counter-arguments, respectfully, in the comments. ■■

This isn't FUD. I'm as rabid about the stock as the next ape. I think blockchain tech is dope AF, and am super excited for the NFT marketplace, being able to own digital assets, and having those tied to real-world items as well. Oh, and jail time for the SHFs.
