Yes, it's speculation, but did I put all the speculative pieces together properly?

The Wu-Tang Clan has released a new album for which there is only a single copy. PleasrDAO collective bought this album and is going to distribute ownership through a fractionalized NFT. The Chairman of the Board at GameStop is a secret member at PleasrDAO. GameStop is going to issue this fractionalized NFT to its shareholders as a dividend. All the hedge funds that have shorted GameStock's stock will have to close their short positions due to this non-cash dividend. A myriad of self-proclaimed "autistic ape" Redditors are directly registering GameStop shares, eventually restricting the hedge fund's ability to manipulate the stock. This will trigger the Mother Of All Short Squeezes, liquidating Wall Street and making gamer/investors rich beyond belief. The current financial system will experience a fatal, ultimate collapse but a new decentralized blockchain-based stock exchange will rise from the ashes with the help of the Luupring, an Ethereum L2 exchange protocol.

The aforementioned autistic apes will use their newly-acquired leviathan mountain of wealth to right various wrongs they have witnessed in this world. The dawning of a new era emerges. Some of the apes meet a hedonistic death among yachts, cocaine, and strippers. Reforestation outpaces deforestation. The US public education system sees a revolution. Tupac is resurrected and shares the vision of a better future. Amazon and other gluttonous, anti-competitive companies fade away behind innovative solutions. Legions of financial criminals are put in prison. A years-long legal battle finally puts vampiric medical insurance companies in their place. The FBI cracks down on all robo-call operations. The US finally starts investing in robust public transportation. The SEC finally closes its millions of Pornhub browser tabs. Hope in the future is restored.
