To understand how screwed SHF are, observe that the total shares outstanding of the stonk is 77 million.
To understand how small this is on a global level, here's some basic math:

$$77,000,000 = 77,000 \times 1,000$$

This means it only takes 77,000 ████████ across the world with 1,000 DRS'd shares in each ████████ to own the entire stonk's outstanding shares. 1,000 shares = 123k (02.17.21). Some ████████ may need 100 people while other ████████ may need only a handful. And there are some cases where 1 person has multiple ████████. But in the end, all it takes is 77,000 ████████ with 1,000 DRS'd shares in each ████████. ████

In Jan 2021, SHF lost control of the stonks's price on public news that SI exceeded the float. What sort of FOMO do you think will happen when it's publicly known that not only has the entire float of the stonk been DRS'd, but all shares outstanding have been DRS'd? This would mean SI will again exceed the float - except this time the float is 0. What do you imagine the FOMO of folks will be when they realize that every share that they purchase w.p. 1 has to eventually be bought back from them? What do you imagine the effect of call buying to be when the entire shares outstanding have been DRS'd? Will it be MADNESS? ████

Not financial advice or advice of any kind. I like █ and a certain stonk.
