We just saw a new record for reverse repo today at almost \$2 trillion (\$1.987 trillion). The desperation is evident. We coincidentally also saw Ken Griffin say that retail GME investors are to blame for the potential loss of teachers pensions, that there is an intentional attack on these pensions and they don't care about effectively taking someone's pension fund. All we have done is buy a stock we like, as any shareholder should do. It is the SHFs who are to blame for any loss to pensions, as we all know. Continue to buy, HODL, DRS.
