Tick Tock Melvies

Tick Tock

Tick Tock

Tick Tock motherfuckers

We're coming

(Tick Tock) motherfuckers we're coming

We're coming hoopin', hootin', hollerin', and stumblin'

The longer you wait the louder the chest thumpin'

Tick Tock Tick Tock we're coming!

Now that I have your attention my fellow apes, I'm calling for your actions.

It's time to start applying what we're learning. You know..like when you learned how to apply a technical to a chart. How you learned how to read an SEC filing. Like how you learned how you you like your desktop setup.

We now know where to find the information, where to find the data, shit some of us evolved to using excel.

Tick Tock. That's all they've got left.

See because it's only a matter of time before an ape enters the dark pool. It's only a matter of time before an ape teaches another ape about Algos and Futures. I mean apes are already teaching apes about options.

Tick Tock. Only a matter of time until we can afford to figure it out. And day by day those ■ 🏠 ■ that we send to you keep bringing more knowledge back to the ■■■ ■ pride.

Start putting what you've learned are learning to practice Apes. Just don't use your ■. Guard it with your might. But start applying.

Tick Tock.

Ask yourself:

At what price do I get the same real time access to information?

What kind of setup and/or environment?

Do I need a certain series or set of series?

Do I need a sponsor?

How does algo trading work?

How does a, b, c influence x, y, z?

Ask yourself that and more.

Tick Tock.

Remember when the pandemic started and the world went into lockdown? All anyone wanted someone to do was find the cure or vaccine. Didn't matter if it was Bill Gates or your fuck ass neighbor Bob. Somebody, anybody. All thoughts were considered. Like injecting bleach(yeah let's not goon that far).

Tick Tock.

We're supposed to be under educated, irrational, incapable. Supposed to be. Told that we are. That we

could never be. All the while the only reason why we rarely are or rarely do is because they've made efforts to make it so. Anybody remember slavery? Remember why it was better for slave to want to be a slave? You know because without the master the slave would never have a pig to slaughter? Remember when women didn't need a rig to vote because the world was too complex for them? Remember? Remember when being gay was a sin and sins didn't deserve equal rights? Remember anything? Anything at all?

Remember the first market crash? Remember the most recent?

Remember the housing bubble? The tech bubble? All the bubbles?

Pop-pop-pop.

Who remained? Better yet..what remained? Beep-bop-booo something was running when the lights went out..something stays running even on the weekends.

Tick Tock

Tick Tock

Somebody may not know nothin'

Somebody ain't do muffin'

But something knows something..something always knows something because that's what it was built to do 24/7/365

Tick Tock.

Somewhere between \$0-\$375792.50 is the combination that actually triggers their stops and unlocks all the tendies for the ■■■■■. Right now we're at \$138.29 and that doesn't match. The higher that combos reaches and the more time that ■ are given chances at trying, the closer ■ have gotten. Apes did it back in January and every form of stop that was in place prevented higher stops being hit until there would've been no stops set.

Tick Tock-Tick Tock Melvies and the like..it was only a matter of time before we figure out where the stops are placed. Each share bought and held is another crack at the code.

We Buy. We Hold. That is creating a problem.

..but what do I know..I'm just an ape smokin' that high frequency.
