I saw a post questioning how to sell your GME stock from Computershare.

Another Ape said, why sell? Just live off the dividends. I thought, what does that look like? I googled ...

Highest current stock price is \$516,435

Highest dividends 6.88%

For our example let's use 10 shares and the two known values

$10 \times \$516,435 = \$5,164,350$ $\times 6.88\% = \$355,307.28$

This is all pre split.

Given these numbers, why sell? If we don't sell, then the price stays wherever it lands correct?

We don't know where it's going to end, but now we have a better idea of what we have! The fuse has been lit and our future looks great! ■■■■■■■■■■
