Hey Guys, longtime Europoor lurker here

Wanted your opinion on this, I'll keep it SHORT and Simple. I was just thinking, Assuming that a gamestop stock dividend would pressure a short into either:

A. Closing position to avoid owing a share to the one you "borrowed" from

B. Or biting the bullet and delivering them the share

This, points me towards the logical conclusion that:

2:1 split: Would result in Shorts owing 50% of the value of the previous share evaluation,

E.G: ****\$200**** Pre-Split. ---> ****2:1 Split**** \---> \$100 Post-Split : $200/100 = 50\%$ owed to Gamestop Hodler.

[Here's an example up to 12:1 split, the theoretical Maximum Gamestop could do for now, assuming all 1 Billion shares would be issued](<https://preview.redd.it/aqje5vjshyr81.png?width=191&format=png&auto=webp&s=55aaf7a3d3f926ec1dae0448f142a4929a4db7da>)

[Calculation, X being the X:1 Split ratio](<https://preview.redd.it/u75ptkr7iy81.png?width=129&format=png&auto=webp&s=e6792f4cb5fdd360912083601a607b5ff6e6c371>)

This leads me to the conclusion that the higher the split, the harder the shorts are hit. Add on top of that the lack of worries about a CS limit sell ceiling. Please pick apart any mistakes or assumptions I made.

Stay Zen. HODL. DRS

EDIT 1: Changing Flair, this isn't deep dive DD, just an observation I haven't seen anyone mention yet
