First off... I'm sorry if this isn't the place to post this question

So I signed up and got myself a gme wallet. After setting it up and receiving an NFT or 2 off my friend, I decided to transfer another of my nfts from a different wallet (southerbys metaverse) to my gme wallet... This was weeks ago and the NFT still hasn't landed in my gme wallet. After having a look on the southerbys website it states that I can only transfer to self-hosted wallets and not to exchange-hosted wallets. Is this the issue here or am I missing something. They also say that there is no gas fees needed in the transfer any help would be appreciated
