

Title: "GameCoin" --- A new crypto entity aimed at helping apes make all things in their lives joined spiritually and financial with the GameStop organization. Looking for financial, legal, and technical advice on how we could launch such a coin or token to allow for the exchange of goods and servicesl.

\*\*[TL/DR: OP is attempting to draw up a proposal to create a crypto coin or NFT called GameCoin to become a currency for apes that is backed by actual \$GME shares (think the Gold Standard, only with shares of GameStop), to help make our lives become more all-things-GameStop-like and cause more shares of GME to be DRS'd in ComputerShare at a faster rate.]\\*\*

This post is a completely far-out, tin-foil hat, crazy idea from a smooth brained ape, but I would like to know if any ape autists out there with financial, legal, and technical expertise think it is possible to eventually lift of the ground.

The idea involves the creation of what I'll call "GameCoin" --- a crypto coin or NFT. Here are the principles behind it:

1. First either a trust or a DAO or a corporation or LLC must be launched to get the effort organized and off the ground. I don't know which, because once again, I have a smooth brain. For now, we'll call it the "Organization".

2. The Organization must start out with some seed money, either through crowdfunding or private sources. Doesn't matter which. Let's say we'll start with \$10,000 to kick things off.

3. The Organization establishes a charter to generate either crypto coins or NFTs (GameCoins) for the purpose of selling those GameCoins to the public. The basis for which the GameCoins are generated are as follows:

A) The Organization will use its initial start up cash to buy shares of GameStop ( GME ) for placement into an Organization ComputerShare account.

B) For every 1 share of GameStop ( GME ) held in the Organization ComputerShare account, 1,000 GameCoins will be generated.

C) Once generated, said GameCoins will be sold to the public to raise further funding, and such additional funding will be used to buy more shares of \$GME.

D) With the additional funding raised through the sale of the GameCoins, the Organization will buy more shares of \$GME, then repeat steps B & C over and over again and again, etc, etc.

4. Millions of apes will acquire GameCoins, knowing that every time they do so it not only results in more shares of \$GME being bought and DRS in ComputerShare, but that they can trade such shares for merchandise in the future. (After launch of GameCoin, with such a strong GME fanbase acquiring the GameCoins, how long until the popularity of GameCoin leads to it being as widely accepted as other crypto currencies?)

5. As part of its charter, the Organization may NEVER sell shares of GameStop.

So you see, the GameCoin becomes a GameStop backed currency. It's like the old Gold Standard for the US Dollar, but even better --- It's the GameStop standard. The end result, is we begin to essentially use GameStop in our daily lives as a currency, through the exchange of GameCoin for goods and services. The more popular GameCoin becomes, the more demand that exists for GME shares, and the more GME shares that get DRS's and locked up in ComputerShare.

The organization is not a brokerage or a trading entity or hedge fund or anything like that, because it may never sell the GME shares in its ComputerShare account. Also, owners of GameCoin can only exchange

the coins through crypto exchanges, but may not cash them in for GME shares through the Organization (---we do NOT want the Organization to act as a mutual fund, as its sole purpose shall be to generate and issue GameCoins).

I realize this is the mad rantings of a tinfoil-wearing smooth-brained lunatic. However, I would humbly appreciate any serious feedback on how we could get such a project off the ground. Thank you.
