If the tutorial insults your intelligence, skip to the bottom where I explain the technical issue. Cheers!

So this could simply be me being an idiot and not knowing how to scan a QR code properly, or there could be some minor technical issues that need to be worked out on their end.

Regardless, here's an issue I ran into when transferring my crypto assets to the GameStop wallet from Binance.

Firstly, I was a little overwhelmed at even beginning the process, as I've had some issues with Binance in the past, but I digress. It's actually quite easy!!

Step by step walk-through:

■■■The first step is to actually download the GameStop wallet extension on your preferred browser. (No shit)

■■■Once activated, you'll have a tab at the top that says Ethereum Layer 1. Click this and you will see another drop down "Loopring Layer 2". Click this.

■■■You should now see a "Deposit Funds" button near the bottom of your wallet screen. Click this.

■■■You have 3 options, choose "View Receive Address". Yes, click now.

■■■If you are using Binance solely on your android or iPhone, like I was, open up your Binance app.

■■■At the bottom of your Binance app screen, click your wallet icon on the bottom right of the page. This will give you the option to select your assets and the option of "deposit" or "withdrawal". Select said asset and then select withdraw at the bottom of this page.

■■■At the top of this page you should see "Address". Click the square shaped icon (to the right of the address field, and right if the portrait icon), this will open up your camera and allow you to scan the QR code that should still be opened on your GameStop wallet.

Technical issue resolution:

■ Simply place the camera in front of the QR code, this will auto fill the field, which for me resulted in an error code. To remedy this, delete the first part of the address that says "ethereum:" and secondly, delete the question mark(?) at the very end of the address.

VOILA! Problem solved. Next, select your network. I believe only ethereum network will actually show up in your GameStop wallet, and will incur a fee dependant on which network you choose.

Note: there will be minimum amounts required to make the transfer, so be prepared to purchase more in the event you don't meet the minimum required to deposit.

Hit withdraw to finalize and enjoy the peace of mind of being out of a broker and truly owning your assets.

YOU'RE FREE! Congrats. BUY HOLD DRS. Support GameStop.

I hope this tutorial helps some of you!
