Added yesterday's loss into the chart. Runup 4B is out of the running (which I originally thought was the less likely of the two tracks). But if we pop Friday then that would be super interesting for the **9th Day 2nd Pop Theory**, especially considering there are very few blue (10%+ gain days) on Fridays.

As for today (if today were day 8), there were large gains in runup 1 and 2 (just not as big as day 9).... and for one of the two Runup3 tracks (A), there was a modest 1.8% gain.

So... if the 9 day thing has any validity, and Runup4 did really start on Aug24, then could see a small gain today and a big one on Friday.

****UPDATE:****

I have removed Runup 4B and added an alternate Runup 1 as I noticed there was a 12% pop on Monday Jan 11 as compared to Fri Jan 8. So that could have been the first pop as well, which would have move that Runups Day9 to Friday Jan22's 50% pop.

Additionally, I added another chart to with %Chg as the Y axis. See below:
