

Title: What is actually going on? How is the price still going down?

I'm a euro ape since June last year, xx holder, about 50% down at the moment but not to worry.

I'm excited as what is happening was expected, but can't wrap my head around the fact that GME price is still plunging.

Is this like a final, desperate attempt from hedgies?

Surely, they knew it would only trigger more buying?

Also the DRSing seems to be getting pace.

And all this silence from RC?

It's going to absolutely explode in the coming days, isn't it?

My question is what is the point of getting the price to go down like this?
