This is a shitpost, but goddammit this is my drunken opinion. I swear to god I don't know how we haven't realized earlier that the only thing that makes sense is GME is literally creating a blockchain DeFi setup that can take on Amazon Web Services.

They don't even have to be profitable in that takeover, they just have to undercut AWS **(and that's fucking poetic)** to get the blockchain/crypto/market use up.

I am dumb about AWS, but so far as I know besides being a book company that has hedgefunds who can bonafide naked short and cellar box competitors and any store that used to be in a mall into bankruptcy... AWS is literally amazon's only sure win or profitable arm of business.

I don't know why GME's new blockchain along with the knowledge that it allows erc721, erc777, erc20, to be minted in one contract like 'only an exchange' would need?..... or is it this!?

I also don't know what some of AWS's services are while I know that they are what a LARGE chunk of businesses use for all their money 'exchanges' in a format that is digital:

"Amazon Web Services offers a broad set of global cloud-based products including compute, storage, databases, analytics, networking, mobile, developer tools, management tools, IoT, security and enterprise applications. These services help organizations move faster, lower IT costs, and scale. AWS is trusted by the largest enterprises and the hottest start-ups to power a wide variety of workloads including: web and mobile applications, game development, data processing and warehousing, storage, archive, and many others."

hmmmm

It was always even more retarded than I was to even suspect GME was making blockchain with LoopRing to do ANYTHING to do with stocks (outside their own or maybe a new subsidiary in the NFT arena)...but GODDAMN I swear this is the first thing in a long time that makes sense.
