I saw a post about XRT being 715% float and if that true i did some calculations....

the percentage of GME in XRT's basket is .75%. The net assets that XRT has is 704.6M so if we multiply those 2 numbers together there's approximately 49,685 shares of GME in XRT.

Well if XRT is 715% short that would mean there is either 30M or 35M (depending if you use 615% or 715% im not sure if 1-100% counts?) of GME shares in XRT that are short.

If this is the case we're mooning whenever they cover XRT if they SHF have to cover..
