Time for your weekly dose of what's in the news and of course the dankest TA this side of the pond.  
Let's jump into it!

...actually, you might want to take your thumb out of your ass and have a seat for this one...

Well, I've come across some sketchy shit in a deep economic dive into market trends specifically looking at the macro trends of bonds, treasuries, and derivatives overlayed with some VIX fractal data and Reverse Repo Rates. THE DATA BLEW ME AWAY!

When overlayed with historical data from 2008 collapse, RRP rates correlate to, on average, 0.1% of the the CDO subprime default amount that banks were taking on. Basically borrowing money from the fed to show creditors that they had daily collateral to stave off margin calls and keep rating agencies happy... until it became too much for even the fed to continue. This happened when the the RRP became about 0.7% of the TOTAL amount "publicly" shown.

Fast forward to end of 2021, we know banks are down \$194 TRILLION in derivatives and the RRP rate just happened to climb to \*roughly\* \$1.94 Trillion or 1% of the amount "publicly" shown.

ERIC!... QUIT CREEPING ON SARAH, YOUR CAB IS HERE. SMH

Ok, I know, that's pretty basic and yes, "IT's pREtTy tHe 2 cHaRtS LoOk tHe SaMe... YaY!!"

This is where it gets somewhat complicated, stay with me. If we take the 4 month (collapsing) 40 minute candle fractal from the SPY, VIX and the 4 major banks players that are DEFINITELY PHUCKED holding 94% of that \$194 Trillion baggie... yes the same banks that took the largest piece of the \$600B bailout last time around...

THEY ALL LINE UP ALMOST EXACT!

Ok, I'm done yelling, I think I pulled a muscle in my neck. Let's all get up, stretch and contemplate about what's going on here...

Collateral requirements JUMPED, new rules & regs are showing SIGNS OF ACCOUNTABILITY, DOJ is still snooping around, EVERGRANDE notes becoming WORTHLESS, MARGINS are tight, LIQUIDITY is even tighter, yearly OPTIONS EXPIRING on Jan 21 holding FTD's from last January are in the 10's of millions of shares, followed by MASSIVE ITM CALLS in the same period, quickly approaching "MAX PAIN", GAMMA SQUEEZES...

PHACK! Did I miss anything?

Oh yah, NFT dividend rumours of a digital condo in GameStop's GMERICA metaverse for each share held. Not sure if you've seen what some people are paying for land and property in the metaverse, but it's already rivalling "real world" property.

Ok let's take another break, I need a beer and a bong rip...

Well if you're not yet jacked, put those thumbs back in your ass and let's talk DANK TA!

Oscillators have changed their tune from sell to neutral with 12 and 26 day MACD's as the only buy. 10 Day Momentum sits at -2.80 so it reads sell, but it's pretty soft to say the least.

The complete change from sell to neutral is a positive sign that shit winds are starting to shift.

Moving Averages are mostly saying sell to the naked eye but most showing VERY WEAK sell signals.

Pivots tell a different story. Extremely BULLISH!

Neutral pivot sits at 159.33 with a 229.94 R2 stretching to 300.54 at R3!

Yah, yah, you're too smooth for this...

Pivots are historic Fibonacci levels, R1-3 are resistance levels. Fibonacci retracement methods use pivots and resistance to determine support levels.  
...so yah, now you know...

That concludes this weeks Dank TA.

Look for the next few weeks to get pretty wild.

My prediction is that we begin to see max pain levels get left in the dust. With collateral falling apart for some of these hedge phucks, look for max pain to become the norm.

Stay classy primates.

Take care of yourselves,

And if you can, someone else as well.

We moon soon.

Eric Jones said so.
