

Title: A question to all smart apes regarding the puts that expire on 21/01 and the hypothesis that they're being used to cover a large amount of FTDs

Assuming that this theory is correct, how would you expect this to play out?

Puts can't be purchased at anywhere near this strike anymore so purchasing that many would be extremely expensive. If a portion/all FTDs that they're hypothesised to cover were then covered, would HFs have t+35 or would it be due at the expiration? Would you just expect nothing to happen due to their fuckery?
