

Title: Today, ORTEX triggered two short squeeze signals. The last time multiple signals were triggered, it was less than a trading day before the January Sneeze (it triggered all three signals then) BUCKLE UP ■

The screenshot shows the ORTEX app interface on a mobile device. At the top, the status bar displays the time 5:10 and signal strength. The app header shows the title "Recent Trading Signals in NYSE:GME" with a help icon. Below the header is a table of trading signals. The table has columns for Date, Trigger, Direction, Signal Return, and a partially visible "Rec" column. The signals listed are:

Date	Trigger	Direction	Signal Return	Rec
Today	Short Squeeze (Type 2)	BUY	N/A	2
Today	Short Squeeze (Type 3)	BUY	N/A	
Yesterday	EPS (Type 3) Buy	BUY	N/A	1
18 Mar	Event Conference Call On The Day	SELL	-3.52	

Below the table, there is a section labeled "Event". At the bottom of the screen, the mobile browser's address bar shows the URL "app.ortex.com" and standard navigation icons.

## Types of Trading Signals

ORTEX has five families of trading signals: Short Squeeze, EPS, RSI, MACD and Company Events. The different types of signal look at different aspects of the metric that is the main base for that signal.

For example, the Short Squeeze signal comes in Type1, 2 and 3. They look at slightly different aspects of how to detect a Short Squeeze, considering everything from Short Interest, Utilization, Cost to Borrow and the Stock Price as well as the rate of change in these. You might see all three of them triggering at the same time, as we did on [GameStop](#), [NYSE:GME](#), just before the epic price moves at the end of January.
