If gamestop decides to release an NFT to each shareholder, which has a random rarity scale built in... hedgies cannot give cash equivalent since each NFT will have a different value.

For those that are not familiar how most NFT PFP (profile picture) drops work here is a smooth brain example. Each collection has a set of traits, some are more rare than others, and some are so rare there is only one nft in the whole collection with that particular trait.

If GAMESTOP did their own PFP collection for shareholders, with rarity included and this was their first launch on their NFT platform, the prices of each NFT would vary massively and make it exceedingly difficult for shorts to settle on a set price if some are 50k USD while others might only be 500.

This is pure daydreaming speculation based on asking myself "what would it possibly look like if their sole mission was to wreck hedgies AND provide value to their shareholders?"

WHAT ARE HEDGIES?!!?

EDIT: and who the in NFT game wouldn't want a GAMESTOP PFP?!!? It doesn't even exist and I want one.

Edit2: For those that don't know.. Hedgies have to cover dividends when borrowing shares. So if they give out a \$20 dollar dividend while you are borrowing the share, you have to pass that \$20 to the actual owner of the share. This is why have a fluctuating dividend would fuck hedgies.

edit 3: if it was remotely successful floor price would be 2+ ETH. Meaning each share borrower would have to return 4k+ USD for each share to the share owner. End game.
