I've seen several posts giving advice to not mention anything to family and friends about investing in gme so no one knows you're wealthy post squeeze. Fuck you. Some of us actually like our folks and want them to prosper with us. We're not going to live merry lives and watch our families suffer being poor and dumb. Some of you are teenagers or in your 20's with no money. Trying to pay school loans without working behind a Wendy's dumpster. So you're uniquely, or not, in a position where you have to convince your parents to not miss out on the next alseT or niocib (backwards).

But how do you, the financial idiot savant of your gene pool, explain a guaranteed lottery ticket to your skeptical kin that think Cramer is their bestie? Read them the explanation below verbatim. Expound if you need to but it'll be pretty straightforward. Broken down into 2 levels.

#### **\*\*Level 1\*\***

Buy Gamestop. Instead of thinking of the stock as a stock, think of it as a dollar bill. When the US economy does well, your dollar bill is able to buy more bread and butter, when the US economy does bad, you can buy less bread and butter. Same with stocks; if asleT (backwards) does well, you can buy more things with the stock, if it does badly you won't be able to buy as much with it. And if the gov prints more money the value of the dollar goes down. If more shares are made for a company, the price goes down. Simple so far, right?

Granted there are reasons why Gamestop should be higher, that's not the point of the squeeze. The problem with Gamestop isn't with the dollar amount, its with the bank. If you, me, Mom, and Dad all put money into the bank then a day later we all go to the bank at the same time for our money back, the bank won't have it. Eventually the bank who runs out of money will go bankrupt and insolvent.

#### **\*\*Level 2\*\***

What happened to all the money? Well in a normal bank, we give them \$100 of money (shares), they loan the money to other people and collect principle and interest. At the end of the day, your money is returned to you. But this bank is corrupt, like really really corrupt. So what they do is give their besties, Goldman, Morgan, and Charles (shf) lines of credit and credit cards with super high limits. With the credit cards they're buying jet skis and cars (cript0, houses, whatever, etc). And they've bought soooooo many that they've caused prices of jet skis and cars to go up up up. With their lines of credit, they've been writing bad checks against the bank, but the bank is still accountable for all the purchases and one day the bank is going to come back to them for it (explains counterfeit shares). What's worse is that when me or you pay our credit cards, we pay with cash or a debit account. They are paying their credit cards and lines of credit, with other credit accounts (FTD).

So even though we only have \$100 of real money at the bank they've (shf) made thousands of dollars on it with loans and credit. Remember each dollar they spend in credit has the same value as the real dollars you have in the bank, so the more credit they spend, the lower the value of your dollar. You want to take the money out of the bank but the bank will only give you a check or an iou (fake shares at brokerages). But you're smarter than that, you know those checks could bounce. You do something called DRS which means you say "No I want my single dollar bills so that I can spend them on coked up strippers" and they say okay and give you and everyone else who asks for their physical cash.

The bank now needs money and they haven't been collecting in cash from their besties. So they ask their besties for cash. Goldman, Morgan etc, don't have cash so they start to sell all their cars and jet skis. Because there are now so many cars and jet skis on the market, the price of those begins to fall. Eventually the besties realize they don't have enough money to pay for all they spent with the required interest, so they go bankrupt. Then the bank realizes it doesn't have enough to pay all it spent so it goes bankrupt and the government steps in to pay for them. But remember every dollar of credit made your real dollar weaker, so even though you only had \$100 in the bank, when all of their credit accounts of thousands of dollars are gone and taken out of circulation, the value of your dollars goes through the roof and straight to the moon.

\-End-

I'm sure that some of that is bullshitted and not a perfect explanation but if you got a better one lets hear it. This summary doesn't need a year on finance reddit to understand. Btw I didn't come up with this all on my own. Patrick Byrne had a lecture in 2017 and pretty much explained level 1, I had to make up and refine level 2.

Remind them that Apex who took away the buy button is now preventing DRS. Let them know that it's now a number included in the earnings report for one of the most heavily purchased stock on the market, something no other firm has ever done.

Note: Don't make your family spend more than they realistically should, I'm sure there are other sneaky tricks we should expect down the line and their heart isn't in it the way yours is. When they see a 10% or 50% drop, you need them to keep a level head so don't push it with someone who won't be in the same mindset as you. Good luck.
